

Enhance business processes and improve performance with Lean Six Sigma certification.

Process and performance improvement is a key objective in modern business with organizations aiming to improve efficiency and banish wasteful practices.

Lean Six Sigma is a management approach to business performance improvement that has blended the two individual specialisms of Lean and Six Sigma together. This blend is designed to enable organizations to achieve the qualitative benefits of Six Sigma but at faster pace by applying Lean principles at the same time.

Lean Six Sigma certification offers the following benefits for organizations and individuals:-

- An improved understanding and awareness of Lean Six Sigma practices
- The ability to analyse and adapt/refine processes to improve efficiency and remove waste
- The tools and practices to reduce process variation and improve quality and consistency

- The principles and techniques to improve existing processes and develop effective new ones
- Added value for customers, employees and shareholders through reduced process variation and waste

The focus of Lean is speed, efficiency and eliminating waste from processes. Six Sigma focuses on effectiveness and reduction of variation.

When implemented properly, this combination can prove a powerful management tool that can significantly improve an organization's performance by providing a structured approach to resolving problems and enabling continuous improvement, whether in an industrial or service-based environment.

IN PARTNERSHIP WITH

Our LSSA syllabi are based on the **'Continuous Improvement Maturity Model' (CIMM)**. This is a framework that guides an evolutionary staged approach for process improvement from an early stage. CIMM incorporates the best practice methods and techniques of process improvement, quality management and new product development.

FURTHER INFORMATION

WHO IS IT FOR?

Lean Six Sigma is designed for individuals at all levels involved in quality improvement and business performance management.
