

Master the role of Agile Business Analyst with AgileBA training and certification

The business analyst role is critical for successful agile projects and development. Despite this, there has been little in the way of detailed best practice guidance that directly addresses the role, responsibilities and skills of the Agile Business Analyst.

In partnership with the Agile Business Consortium, APMG International is delighted to offer AgileBA - a professional training and certification scheme to support those working in (or aspiring to) an Agile Business Analyst role.

Our syllabus is based on the AgileBA Handbook, published by the Agile Business Consortium. The handbook offers useful, practical and comprehensive guidance on the role of the Business Analyst working in an agile way.

Along with the handbook, training and certification aims to provide:

- Knowledge and understanding of the Agile Business Analyst role and responsibilities;
- Context to the role beyond the individual project, in relation to organizational mission and strategy;
- Additional depth, guidance and techniques for the Business Analyst role.

The guidance is based on the Agile Business Consortium's Agile Project Framework, an approach which defines the role of the project-based Business Analyst in relation to business, development and testing roles at all levels. However the guidance goes deeper, with many generic and popular agile techniques also included.

AgileBA is the latest addition to our agile 'family' of training and certification schemes, joining the popular and well established AgilePM (Agile Project Management) launched in 2010 and AgilePgM (Agile Programme Management) launched in 2014.

FURTHER INFORMATION

WHO IS IT FOR?

AgileBA guidance, training and certification are designed to benefit a wide range of roles including Business Analysts, Change Analysts, Project Managers, Scrum Product Owners/Managers, Systems Analysts and Agile Developers.
