Candidate Testimonial

Q What are your thoughts on the training and exam?

I attended the training in 2019 at Lumify and it was comprehensive, the practice tests are framed well. I took the exam online using a Proctor Service and it was really a hassle-free experience to sit for the exam from the comfort of my own home.

Q Was your training conducted virtually or in a physical training room?

My training was conducted in a physical training room.

Q Have you used the AgileBA certification in your job role?

Yes the case study based exam format has helped me refine the existing approach we use in our projects, to more structured business analysis principles and practices.

Q Can you expand on that further?

My biggest take away from the course were the requirement gathering techniques and the different methods of organizing workshops, which we can apply as best practices within a Project to see definite improvements in stakeholder management.

Q How has the certification helped you develop your career?

I took the course to learn the best practices and methods of Agile Business Analysis, which will definitely add on to my existing expertise gained on the job, and allow me to relate the Agile principles to the practices we follow in our projects.
