

Lean Six Sigma

Improve processes and do
it continuously

Enhance business processes and performance with Lean Six Sigma training & certification.

Lean Six Sigma is a powerful, team-based approach for dramatically improving business processes through eliminating waste and increasing quality and efficiency, resulting in enhanced customer experience, lower costs and happier staff.

It achieves this by providing a structured approach to resolving problems and enabling rapid improvements, whether in a manufacturing or service-based environment.

6σ Lean Six Sigma is a combination of:

- ▶ **Lean:** originally developed by Toyota, is a set of principles, practices and tools aimed at maximising customer value.
- ▶ **Six Sigma:** a structured approach aimed at increasing product and service quality by focusing on processes.

When implemented effectively, this combination can prove a powerful management tool for improving an organization's performance.

Benefits of APMG and LSSA Lean Six Sigma training and certification:

- ▶ An improved understanding and awareness of Lean Six Sigma practices;
- ▶ The ability to analyse and adapt/refine processes to improve efficiency and remove waste;
- ▶ The tools and practices to reduce process variation and improve quality and consistency;
- ▶ The principles and techniques to improve existing processes and develop effective new ones;
- ▶ Added value for customers, employees and shareholders through reduced process variation and waste.

Our syllabi are based on the 'Continuous Improvement Maturity Model' (CIMM), a framework that guides an evolutionary staged approach for process improvement.

Who Is It For?

Lean Six Sigma is aimed at managers, aspiring managers and other key personnel or subject matter experts involved in improving the performance of business processes.
